PATENT

#### IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of:

Geoffrey B. Rhoads

Application No: 08/637,531

Filed: April 25, 1996

For: PHOTOPGRAPHIC PRODUCTS AND

METHODS EMPLOYING EMBEDDED

**INORMATION** 

Examiner: S. Cangialosi

Art Unit: 3642

Patent No. 5,822,436 Issued October 13, 1998

CERTIFICATE

JUL 2 5 2001

a consideration

TO THE ASSISTANT COMMISSIONER FOR PATENTS Washington, D.C. 20231

#### **LETTER**

In checking the subject original Letters Patent with our copy of the application, the following errors which occurred in the printing of the patent were noted:

#### In the Specification

Column 1, Line 8, "August 9,,1995" should be -- August 9, 1995,--

Column 2, Lines 10-13, delete "While the foregoing summary particularly addressed image data and photo-duplication equipment, the same principles are equally applicable to other types of steganographically-encoded data and other contexts." (See substitute specification and Amendment dated 11/13/1997.)

Column 8, line 14, after "rms noise as" insert --we did in the normal gain setting, we now find--.

Column 9, line 33, change "If S possible," to --If possible--.

Column 15, line 4, change "bow" to --how--.

Column 15, line 31, change "Printinig" to --printing--.

Column 19, line 53, change ""0". or a" to --"0" or a"--.

Column 30, lin3e 52, change " $P_{\text{pcn}}$ " to  $-P_{\text{s-pcn}}$ --.

Column 35, line 23, change "invention. hopefully" to --invention, hopefully--.

Column 37, line 38, change "JPEG/IMPEG" to --JPEG/MPEG--.

Column 46, line 34, change "thes e" to --these--.

Column 66, line 32, change "riciculous" to --ridiculous--.

JRM:dks 7/18/01 44397 PATENT

Column 66, line 36, change "-2,400,000" to --~2,400,000— Column 74, line 4, change "such AS" to --such as—

Column 76, line 58, insert the following: (See Amendment filed November 13, 1997.) -- Errata

Applicant is preparing a steganographic marking/decoding "plug-in" for use with Adobe Photoshop software. The latest version of this software, presented as commented source code, is attached as Appendix B. The code was written for compilation with Microsoft's Visual C++ compiler, version 4.0, and can be understood by those skilled in the art.

This source code embodies several improvements to the technology disclosed in applicant's prior applications, both in encoding and decoding, and also in user interface.

Applicant's copyrights in the Exhibit B code are reserved, save for permission to reproduce same as part of the specification of the patent.

While the Exhibit B software is particularly designed for the steganographic encoding and decoding of auxiliary data in/from two-dimensional image data, many principles thereof are applicable to the encoding of digitized audio, as contemplated by the presently claimed invention.

Before concluding, it may be instructive to review some of the other fields where principles of applicant's technology (both in this application, and prior applications) can be employed.

One is document security for passports, visas, "green cards," etc. The photos on such documents can be processed to embed a subliminal data signal therein, serving to authenticate the document.

Related to the foregoing are objects (e.g. photos and ID cards) having biometric data embedded therein. One example of such biometric data is a fingerprint, allowing the authenticity of a person bearing such an ID to be checked.

Another application is smart business cards, wherein a business card is provided with a photograph having unobtrusive, machine-readable contact data embedded therein. (The same function can be achieved by changing the surface microtopology of the card to embed the data therein.)

Yet another promising application is in content regulation. Television signals, images on the internet, and other content sources (audio, image, video, etc.) can have data indicating their JRM:dks 7/18/01 44397 PATENT

"appropriateness" (i.e. their rating for sex, violence, suitability for children, etc.) actually embedded in the content itself rather than externally associated therewith. Television receivers, web browsers, etc., can discern such appropriateness ratings (e.g. by use of universal code decoding) and can take appropriate action (e.g. not permitting viewing of an image or video, or play-back of an audio source).

Credit cards are also likely candidates for enhancement by use of steganographic marking, providing an invisible and covert data carrier to extend functionality and improve security.

The field of merchandise marking is generally well served by familiar bar codes and universal product codes. However, in certain applications, such bar codes are undesirable (e.g. for aesthetic considerations, or where security is a concern). In such applications, applicant's technology may be used to mark merchandise, either through in innocuous carrier (e.g. a photograph associated with the product), or by encoding the microtopology of the merchandise's surface, or a label thereon.

There are applications -- too numerous to detail -- in which steganography can advantageously be combined with encryption and/or digital signature technology to provide enhanced security.

Medical records appear to be an area in which authentication is important.

Steganographic principles -- applied either to film-based records or to the microtopology of documents -- can be employed to provide some protection against tampering.

Many industries, e.g. automobile and airline, rely on tags to mark critical parts. Such tags, however, are easily removed, and can often be counterfeited. In applications wherein better security is desired, industrial parts can be steganographically marked to provide an inconspicuous identification/authentication tag.

In various of the applications reviewed above and in applicant's earlier applications, different messages can be steganographically conveyed by different regions of an image (e.g. different regions of an image can provide different internet URLs, or different regions of a photocollage can identify different photographers). Likewise with other media (e.g. sound).

Some software visionaries look to the data when data blobs will roam the datawaves an interact with other data blobs. In such era, it will be necessary that such blobs have robust and incorruptible ways to identify themselves. Steganographic techniques again hold much promise here.

JRM:dks 7/18/01 44397 PATENT

Finally, message changing codes -- recursive systems in which steganographically encoded messages actually change underlying steganographic code patterns -- offer new levels of sophistication and security. Such message changing codes are particularly well suited to applications such as plastic cash cards where time-changing elements are important to enhance security.

Again, while applicant prefers the particular forms of steganographic encoding, the foregoing applications (and applications disclosed in applicant's prior applications) can be practiced with other steganographic marking techniques.

Having described and illustrated the principles of my invention with reference to various embodiments thereof, it should be apparent that the invention can be modified in arrangement and detail without departing from such principles. Moreover, a variety of enhancements can be incorporated from the teachings of my prior applications.

Accordingly, I claim as my invention all such embodiments as come within the scope and spirit of the following claims and equivalents thereto.--

#### **Appendix**

Add Appendix B, omitted in the printed patent, but submitted to the Patent Office with the patent application.

All of the above errors are attributable to the Patent Office, and a Certificate of Correction is enclosed in duplicate to make formal notice of the errors in the subject patent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This version incorporates the Version 1.0 Alignment core algorithms from Geoff Rhoads, 1/17/96.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PaintDIB()
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ETCH STOR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MC NC
```

```
This function pets the width of the Dis from the SiTWAPPHYDER (ALCH Sieds if it is a Windows ), Despis Dis or from the SITWAPPHENDER width Sieds of it is an other-septen Dis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This function gate the height of the DIB from the BITHOAPINTONEADER height field if it is a Windows J.O-style DIB or from the BITHUAPCHEMENDER
                                                                                                                                                                                                                                                                                     This function calculates the address of the DIB's bits and returns a pointer to the DIB bits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LPHITMAPLHFOREAMER lphmi/ // pointer to a Win 3.0-style DIB

                                                                                                                                                                                                                                                                                           This function resumes a palacter (rem a DTB ye altosting manuary for the silection in the palacting manuary for the silection in opicial palacte. The palacting a palacter from this logical palacter. The palacter from this logical palacter and then returning the palacter handle. This allows the DTB to be displayed wings the best possible colors (important for DTBs with 31s or more colors).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ppsi-spainterf(i):pshad = lphmo-bmciColors(i):rphthed,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This function calculates the number of colors in the DID's color table by finding the bits per pine 1 for the DIB (whether Wall,0 or other-seyls DIB). If bits per pine) at 1, colorsel, if 4, coloresli, if 8; coloreslie, if £4, co colors in color table.
                                                                  This function gets the site required to store the DIB's palette by maliciplying the number of colored by the size of an Mangado (for a Windows 1.0-style DIB) or by the size of an Mannible (for an other-style DIB).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /• If this is a Windows-style DIB, the number of colors in the color table on be lass than the number of bits per givel.
• allows for (i.e. lpdi-pkinites can be set to some value).
• If this is the case, return the appropriate value.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The large class is used to read .Bot and .DIB large files, and very large class is used to read .Bot and .DIB large class is second to provide a set of service which lamines the scale from brough dal with the specific of the DIB former. Also, the approach tend to isolate platform specific and its promet specific and the former specific class. The specific and the former specific platform to specific and the former specific part of the former type of file forms twelf first this flass, for not the classers type of file
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This header file should be included by any module which creates or makes use of Image objects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       pounts

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   // (Suppression)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This function moves the contents of the patched data array back into other 18 data array back into other 18 data and a state one the core algorithms have been used to sign the data in the patched array or and want to oubstate the 1819 to refigure the things. Note that this requires that we create our own patched, aimse otherwise we don't know that the new data values have corresponding entries in the patched.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     // Don't do any palette work for 24 bit color: there is no palette.
       // you e bui care any other man 2s but deals we will need to the color feet and the same data to be indices into the color feet by the occur wile. Dete we we same gray-scale (i.e., r.g.) triples are all equal for any feet of the gray and the gray care and the gray and the gray and the gray and the gray of the colors (i.e., r.g.) triples are all equal myphases. • m_phanical cost (published); reporterent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The Parishprony class is responsible for creating an efficient binary. The Parishprony class is responsible for creating the reflect or effort in the lange. This representation is "effortune" in the lange. This representation is "effortune" in the Link it produces the sense local course and requires fewer cost bits than there used by the equivalent AUTI representation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          if ([file.Rend([LPETh)AbmfHeader, sixeof(bmfReader)) |-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Purpose: Reads in the specified DIB file into a global chunk of escory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         // it's an TLE bitmap, we can't calculate size, so trust the // bisisalmage tield

    Now, calculate the offset the actual bitmap bits will be in
the file -- it's the bitmap file header plus the DIS beader,
    plus the sise of the color table.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      // It's not RLE, so size is Width (DWORD sligned) * Reight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 // Write the file header

PackHessage();
wassage for use by the signer. It creases an array of
Array competers the cheeserm for the compact string,
and then creates a but array containing the one
and then creates a but array containing the compact
areases that is the form the signer core algorithms
required.
